Lifting Operations Fundamentals of Rigging with Practical (T-102)

Program Overview

This program will provide students with fundamental knowledge of lifting and rigging to enable them to perform lifting operations specific to their requirements and environment in accordance with local regulations and industry standards.

Training Objectives

Upon completion of the program students will be able to:

- Demonstrate knowledge of basic requirements of regulations, and their responsibilities
- Demonstrate knowledge of the rigging plan, load control and the rigging triangle
- Calculate load weights
- Demonstrate rigging hitches and the selection of lifting equipment for the appropriate application
- Complete a pre use inspection of rigging hardware and slings
- Demonstrate appropriate hand signals

Program Content

- Risk management and the rigging plan at the load hook
- Load control and rigging principles
- Loads affecting rigging and the rigging triangle
- Application of rigging hardware, slings and the appropriate hitches
- Pre use inspection of rigging hardware and slings
- Wire rope clips and terminations
- Practical application of equipment and principals in lifting scenarios with the aid of a crane

Format

The program is a combination of theory and practical exercises. Students are evaluated by means of a written examination. A certificate of completion will be issued which aids in addressing the various legislative requirements placed upon employers to ensure their employees are competent.

Duration

16 hours

Location

The standard program is held at our Head Office and manufacturing hub based in Dartmouth Nova Scotia, however we are able to utilize our other Hercules locations around the country or hold training at your facility.
