Rollgliss Fall Rescue Training (T-205)

Program Overview

This program will provide students with fundamental knowledge of safely lowering a fallen worker using the DBI SALA Rollgliss R500 or R550 rescue system.

Training Objectives

Upon completion of the program students will be able to:

- Complete a pre-use inspection of the Rollgliss device
- Conduct a self-rescue
- Conduct a two Person rescue
- Select appropriate anchor points
- Identify relevant hazards
- Demonstrate care and maintenance in accordance the manufacturers instruction for use
- Develop a fall protection and rescue plan

Program Content

- Pre-use inspections
- Don a harness and ensure it fits properly
- Building a fall protection plan
- Building a rescue plan
- Selecting anchor points
- Self rescue
- Assisted rescue
- 2 person rescue
- Suspension trauma

Format

This program is conducted in the field with instructor led demonstrations of the equipment in practical scenarios. Students will be required to demonstrate proper application of the device in a self-rescue and two person rescue scenario. Students are evaluated by participation. A certificate of completion will be issued which aids in addressing the various legislative requirements placed upon employers to ensure their employees are competent.

Duration

3-4 hours per 6-10 students

Location

The standard program is held at our Head Office and Manufacturing Hub based in Dartmouth, Nova Scotia. However, we are able to utilize our other Hercules locations across the country, or hold the training at your facility.

Prerequisite

All students must show proof of a current fall protection training program.

Note

This program requires students to climb, work at heights, and to be suspended in their fall protection harness. If you have any physical or health concerns please notify the instructor and, your doctor should be consulted before working at heights or participating in this training.

PPE

- Gloves
- Hard Hat w/chin strap
- CSA Approved Boots
- Full Body Harness Class A/D/L
